

## **Alpine Elementary School Community Council Minutes December 16, 2016**

- Mr. Perdue share school improvement data with the SCC. The SCC looked at three years of comparative SAGE data and the 2015-16 DIBELS assessment results.
- SAGE data indicates that Alpine Elementary students are above state and district averages and the school cumulative score continues to improve from year to year. Mr. Perdue told the SCC that Alpine Elementary received an A from the State of Utah on the school report card until the State changed the cut scores. The staff celebrated their success nonetheless.
- DIBELS scores are at or above district average except in kindergarten, and a plan is in place to raise kindergarten DIBELS scores.
